The Cardiovascular Directorate
The Cardiovascular Unit has an international reputation for innovation and clinical excellence, where a full range of cardiac surgery except heart transplant, vascular surgery for all arterial, venous and lymphatic diseases, non-invasive and invasive cardiology investigations and therapies are performed.

There are four cardiac theatres, with a fifth hybrid cardiovascular theatre being installed, five catheter laboratories, three undertaking coronary interventions, including primary angioplasty and TAVI, two for invasive electrophysiology, simple and complex pacing. Ultrasonic angiography and endovenous laser treatment are available and a state-of-the-art endovascular suite provides minimally invasive endovascular treatment of abdominal aortic aneurysms and thoracic aortic pathology. Recently there has been a large expansion in staffing at consultant level, particularly in non-invasive cardiology. We offer 24 hour on-site consultant level cover for vascular and cardiothoracic surgical and radiological emergencies.

The strong research team of doctors, nurses and scientists are now part of King's Health Partners Academic Health Sciences Centre and have formed a large and progressive clinical academic group within the larger AHSC.
